Т.А. Костромина, Т.А. Гладилина Сборник тестовых заданий по латинскому языку и основам медицинской терминологии для иностранных студентов лечебного факультета (на английском языке). – Курск: КГМУ, 2012. – 102 с.

Рецензенты:

Ляшев Ю.Д. – д.м.н., профессор, декан факультета иностранных учащихся Курского государственного медицинского университета,

Шамара И.Ф. – к.филол. наук, доцент, заведующая кафедрой иностранных языков Курского государственного медицинского университета.

Сборник тестовых заданий составлен в соответствии с ФГОС ВПО – 3-го поколения.

Тестовые задания созданы в соответствии с концепцией тестового контроля знаний студентов, разработанной в КГМУ и на основе Методических рекомендаций «Тестовая оценка знаний студентов на кафедрах (курсах) латинского языка и основ терминологии» (Т.А. Костромина, Москва, 2008).

Сборник включает 350 тестовых заданий трех уровней восприятия для анкетного и компьютерного тестирования в оболочке Adit TestDesk с эталонами ответов.

Терминологическая база взята из международных номенклатур, в заданиях отражен материал основного учебного пособия.

Использование в учебном процессе тестовых заданий, включенных в сборник, позволяет организовать и осуществить тематический, рубежный и дисциплинарный контроль знаний студентов 1 курса факультета иностранных учащихся, обучающихся на английском языке.

ВВЕДЕНИЕ

Создание предлагаемого учебного пособия продиктовано потребностями модернизации современного образования.

Важным компонентом становления личности является её профессиональная компетентность. Она оценивается навыками владения современными технологиями в области медицинской практики, которые основываются на владении специализированным языком медицинской профессии.

С этой целью инновационный процесс в медицинском вузе, в частности на кафедре латинского языка и основ терминологии КГМУ, должен осуществляться с учётом формирования предметно-профессиональных компетенций, что обеспечивает сформированность основ латинской медицинской терминологии у студентов-иностранцев.

Сборник тестовых заданий может быть использован не только в учебном процессе, но и при выполнении самостоятельной работы студентами, что позволяет осуществить контроль сформированности соответствующих компетенций. Кроме того, он также выполняет обучающую функцию, поскольку систематизирует учебный материал и делает возможным осуществление самоконтроля на основе приводимых ключей к тестовым заданиям.

Предполагается, что в ходе обучения студентов терминологическому латинскому языку посредством тестовой методики будут достигнуты следующие цели:

- формирование представления о предмете «Латинский язык» и современном состоянии медицинской терминологии;

- формирование компонентов профессионально-терминологической компетенции:

- грамматической компетенции на материале международной анатомической терминологии,

- компетенции терминологического словообразования раздела «Клиническая терминология»,

- компетенции владения способами извлечения информации из наименований лекарственных средств раздела «Фармацевтическая терминология»,

- компетенции владения терминологическим минимумом трех разделов медицинской терминологии,

- компетенции терминологического тренинга, формируемой при выполнении тестовых заданий;

- формирование когнитивных, аналитических и информационных умений у студентов.

INTRODUCTION

Creation of the proposed tutorial is dictated by the needs of the modernization of the higher medical education.

The professional competence is an important component of a personality development. Its level is estimated by the level of modern technology skills mastering in the field of medical practice, which are based on the study of the specialized language of the medical profession.

For this purpose the Latin Medical Terminology Department of the Kursk State Medical University (KSMU) is focused on the formation of the subject-professional competencies, which provide the basics of the international language of communication of physicians for bilingual students.

The tutorial "Collected Tests in Latin Medical Terminology for foreign students of the medical department" may be applied not only as a teaching aid during regular classes, but it may be used by the students for independent work, which enables the teachers to check the level of the corresponding competences.

Besides, the teaching function of the tutorial is evident, as it systematizes the studied material and makes self control of the students possible due to the offered keys to the tasks.

It is assumed that in the process of studying the basics of Latin medical terminology by using the test techniques the students will achieve the following objectives:

- formation of the notion of the Latin language and modern state of the medical terminology;
- formation of the components of the subject-professional competence comprising:
 - grammar competence, mastered on the basis of the International Anatomical terminology,
 - competence of terminological word building based on the "The Clinical Terminology",
 - competence, based on the analysis of types of drug names and obtaining the necessary pharmacological information from them in the "Pharmaceutical terminology",
 - competence of assuming the terminological vocabulary of three subdivisions of the medical term system.
 - competence of terminological training, formed by drilling the test tasks;
- formation of cognitive and analytical students' skills.

The authors hope that the tutorial "Collected Tests in Latin Medical Terminology for foreign students of the medical department" will help students not only to master the Latin Medical Terminology, but will also create firm relations between Latin and professional disciplines which is our major aim.
