

Books on biological chemistry

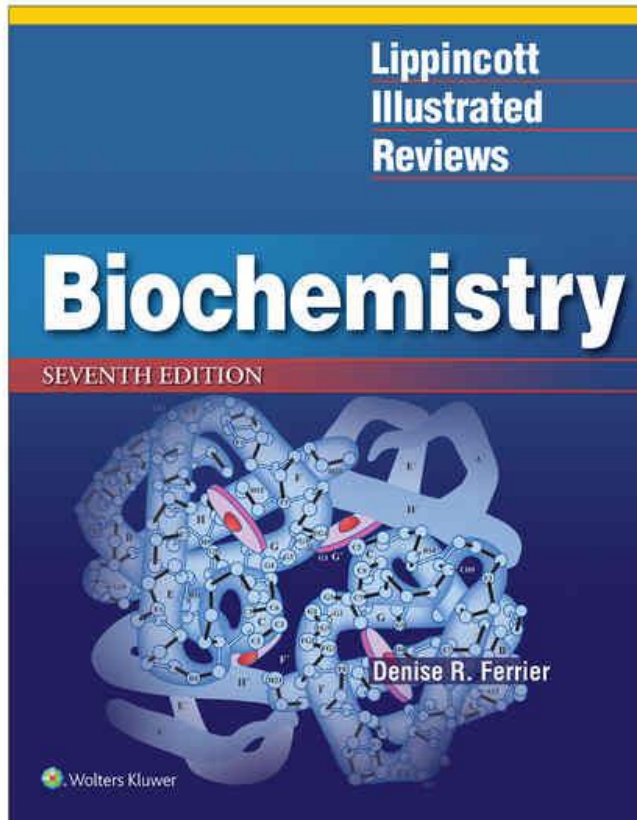

Biochemistry (biological or physiological chemistry) - the study of chemical composition of living cells and organisms, as well as chemical processes, being at the core of their vital activity. The term “biochemistry” had been occasionally used since the mid-18th century. In 1903 Carl Neuberg, German chemist, introduced this term in its classical meaning into the sciences society.

Biochemistry is a comparatively new study, which is located at the intersection of the Biology and Chemistry fields.
